

Aerial Work Platform

Aerial Work Platforms - There are numerous attachments meant for lift trucks that can be used to be able to help expand the capabilities of your forklift and allow you to carry things, handle materials with greater ease or to finish clean-up tasks.

Lots of the attachments are specially designed to fit on the forks themselves. Blade extensions for example, are used whenever you need more blade length, which increases lifting capacity. Blade extensions come in lengths ranging from forty eight to one hundred twenty inches. Rounded or triangular attachments are one more type utilized when moving rolled material to be able to ensure it does not roll off of the traditional flat forks.

Lifting attachments could be pivoting and telescoping crane attachments. They come in various styles. These attachments are normally meant for transferring metal bars, poles, lumber or whichever kind of bulky items. Other attachments like for example different kinds of hook plates and hooks are presented to lift objects making use of a chain or sling. Slab lifters and magnetic filters are other things which could be utilized together with hook attachments. Slab lifters are specialized attachments that are designed for carrying a variety of materials that are delivered in a slab or sheet format. Carpet poles and rug rams are other lifting tools which attach to your forklift in order to make transporting rolls of carpet easier. The accessory connects onto the lift truck's blades and has a pole which goes through the center of the carpet roll.

There are several types of forklift accessory used for facility maintenance like for example snow forks. These industrial blades could be attached to front end loaders and used for transporting materials like for instance dirt, and mulch as well as snow. Other common cleanup attachments include standard sweepers and magnetic sweepers. Standard sweepers includes a broom that the lift truck forks connect onto for sweeping big spaces like warehouse, factory floors and parking lots. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is utilized in places where there is lots of metal debris like on shop floors for example. Sweepers have widths up to 60 inches and this surface area makes clean up fast and effortless.

A material spreader is another forklift accessory that is normally used at facilities. These spreaders are useful for various applications like spreading fertilizers, insecticides, seeds, ice melt, rock salt and pellets.

Another optional lifting attachment are work platforms. These can be used by a lot of different businesses daily. Platforms may range in size from 36" x 36" to up to 60" x 60". A few units may be offered and are capable of folding up and storing into a smaller place. Work platforms are designed to raise employees up to an overhead location using the forklift. Larger platform units have additional space for staff to be able to bring tools and other necessary items meant for the job. Often work platforms are constructed of steel or plywood material.
